

Plastomer Technologies Displaying Wide Array of Capabilities at Show

Plastomer Technologies has announced a wide array of PTFE and engineered plastic related products and capabilities that will be on display in their booth at MD&M East.

In booth #2381 at the show, the company's ability to produce custom plastic products to the medical industry will be showcased. With PTFE products such as fiber for medical stents and suturing, tape for wire wrapping and high purity PTFE material for use in medical equipment components, Plastomer Technologies ensures medical device manufacturers have the right PTFE product to fit their needs.

Also on display will be a wide variety of custom fabricated plastic parts. The company specializes in ensuring cleanliness and tight tolerance requirements are fully met with their state-of-the-art machine shop, producing custom components to specification from all medical grade engineered plastic materials.

All plastic products produced by Plastomer Technologies are custom made to specification. More information can be found on the companies various capabilities at www.plastomertech.com.
