Conical Vacuum Dryer

Bolz-Summix conical dryer-mixers are designed for processing all types of bulk solids materials.

Typical duties are **drying under vacuum, mixing/blending, liquid or gas injection, and solvent recovery**, and can be carried out with absolute precision. Conical dryers can dry down to the lowest levels of moisture content and gently handle the product to avoid damage to the most sensitive materials, deliver the highest mixing accuracy, without segregation during discharge.

Conical dryers also require the least amount of energy consumption to operate.

It is also possible to perform multiple automated processing tasks simultaneously in a single piece of equipment in a fully safe and enclosed environment.

Units also feature the most advanced features such as heated mixing screw or heated internal cone, and CIP, SIP systems.

This equipment also offers precise scale up from laboratory size units to full scale production size units.

Sizes range from 5-19,000 liters.
