Eastern Instruments will be demonstrating the CentriFlow® Meter, a mass flow metering device for measuring dry solids continuously in a process with accuracies of +/- 0.25% for mixing, blending, or ratio control applications. The demonstration will incorporate the CentriView™, a new electronics option to view process parameters and control common process functions such as batching and flow control both as separate functions and as combinations. Also introducing plug resistant VAP<sup>3</sup>® Pitot technology for industrial applications where accurate air flow measurement is needed for process control and the High Beta® Flow Element, which utilizes VAP<sup>3</sup>® Pitots, straightening flow profiles in complex duct systems for accurate measurement.
