

Press Release:

Heinkel "F-Series" Inverting Filter Centrifuge

Heinkel® has developed and launched the second generation of the Inverting Filter Centrifuge.

The new "F-Series" generation of machine builds upon the proven Inverting Filter centrifuge technology originally developed by Heinkel®, and incorporates new technologies and features that have been developed, and also by working closely with our clients.

Some of the new features offered by the new "F-Series" are as follows:

- Compact design, smaller Foot Print
- Higher G-Force results in lower residual moisture
- Higher Production Throughput
- 50% Reduction in machine parts
- New (PAC®) Pressure Added Centrifugation technology
- Better Value cost ratio
- Greatest flexibility in products that can be centrifuged
- Easy CIP cleanability for multi-product application

This new machine will be displayed at the 2007 ChemShow booth #1319 and can also be demonstrated in our fully equipped laboratory.
