

New product press release:

HF Inverting Filter Centrifuge with Direct Contact Drying

Heinkel offers the HF model centrifuge which incorporates inverting filter, thin cake processing technology, along with the optional **PAC®** direct contact drying of the material for separation/filtration to provide tremendous processing advantages. With these combinations of technologies, it is possible to select the exact final moisture content of the finished product. Other advantages include no residual heel remains on the filter cloth, and full flexible process recipe management. The HF machine will deliver higher production capacities, than Peeler or Vertical basket style machines, and will excel in handling difficult filtering materials, that Peelers or Vertical style machines dare not attempt.
