

Laidig Cone Bottom Reclaimers

Laidig Systems Inc. provides silo and reclaimer systems for cone bottom applications up to 45' in diameter. With confined space friendliness in mind, all of the drive components are external to the stored product. Typical products effectively stored and handled include powders, chemicals, wood residue, grain meals, and other materials with poor flow characteristics.

In addition, Laidig provides a complete family of silo and dome storage and reclaim systems for up to 150' in diameter.
