

Pulley Alignment Goes Green!

The award-winning **SheaveMaster**[®] now features a Green Line Laser for optimum visibility under bright sunlight conditions – ideal for outdoor applications. The waterproof SheaveMaster Greenline mounts magnetically to the face of a pulley. A permanently calibrated green laser beam fans out striking 3 magnetic targets on the opposite pulley and measures angular, offset and twist misalignment of the drive. It can be used equally well on chain driven sprockets.

Traditional methods are cumbersome and require two people. One person does it easily and more precisely with the battery powered SheaveMaster!

Better alignment reduces belt wear, noise, vibration and downtime.
