

Process Sensors Corporation's NIR transmitters offer proven accuracy and stability in a wide range of applications. The **MCT360** Multi-Constituent NIR Transmitter, a True Stand Alone Transmitter, provides off-line accuracy under on-line operating conditions. Simultaneous information on important product constituents is instantly available to plant operators and control systems. **MCT360** location is dictated by the process and conveying mechanisms. Measurement can be made looking through a viewing window into the bottom of the spray dryer or prior to the screener, in order that corrective action can be quickly implemented. Often, the moisture measurement can be used directly in closed loop control. Please visit us at Booth #2719 or at www.processsensors.com
