

### **Manual Clean Drawer Magnet (Model Pictured: ND288)**

Engineered to remove medium and fine ferrous contaminants from dry, free flowing products under gravity flow. Puritan's Drawer Magnets protect processing machinery and improve product purity. Multiple staggered rows provide maximum contact area for product flow. As product flows through the stainless steel housing, it cascades over the staggered rows of magnetic tubes. Ferrous contaminants are pulled to the surface of the magnets where they move to the underside of the tube to prevent washoff.
