STINGER[®] Conveying System for reliable transferring of TIO², Carbon Black and other hard-to-handle materials

Young Industries, Inc patented STINGER[®] conveyor is the best solution for transferring difficult-to-handle products. The STINGER[®] conveyor works best on products that are cohesive such as pigments, carbon black, talcs, clays, sterates and other similar materials.

The conveyor uses TransFlow[®] technology to precisely control the conveying air and condition the product. This causes difficult-to-handle products to move in the conveyor pipe.

Using the STINGER[®] conveyor with a bulk bag unloading frame has made the unloading and transferring of TIO², Carbon Black and other hard to handle products convey reliability over horizontal distance of 100 horizontally, 30 feet vertically and through several elbows at rates up to 80,000 pounds per hour.

For more information visit www.younginds.com/STINGER3 or call 800-546-3165 or email mktinfo@younginds.com
