New Large Rotary Airlock Valves for Biomass Processing Plant

Young Industries designed several new large rotary airlock valves for a biomass processing plant. The rotary valves are designed to handle a very large throughput rate with a minimum of gas leakage. The rotary valves are complete with Young Industries patented end seal design providing up to a 50% reduction in gas leakage. The HC-ES valve features include a shrouded end scalloped bottom rotor S/S with adjustable/replaceable 304L S/S tips, tungsten carbide coated housing bore, pocket purge located in end plate, motion sensor, exterior of valve housing and end plates complete with 60 PSIG dimpled steam jacket and 30" x 60" inlet with baffle. For more information go to www.younginds.com/HCRV3
